

# CASE STUDY

## Davicon Mezzanine Floors Ltd

Davicon Mezzanine Floors is the recognised brand for quality mezzanine floors, support steelwork and integrated mezzanine solutions with over 30 years experience. Flexibility of working is vital to their success and the company chose AirDeck as it's primary height safety solution as it was easy to install, quick to move and 100% effective.

*“AirDeck demonstrates once more that speed and flexibility and total safety go hand in hand.”*

## BACKGROUND

Davicon Mezzanine Floors is the recognised brand for quality mezzanine floors, support steelwork and integrated mezzanine solutions, with over 30 years experience. They design and install mezzanine floors into existing buildings and create extra space for rapidly growing companies and organisations.

## THE PERFECT SOLUTION

Flexibility of working is vital to Davicon's success and they needed a height safety solution that is easy to install, quick to move and 100% effective. The steel columns erected as part of the structure complicated the issue as any fall-arrest system needed to work around these obstacles.

AirDeck provided the perfect solution answering all the questions that were asked of it. It is quick to install – an area to cover 80m<sup>2</sup> can be inflated in about 30 mins – less

if more than one inflator is used and these can be buckled into place around the steel columns, which themselves provide a solid anchor point for the whole assembly. Buckled additionally at the bottom, AirDeck provides a very secure fall arrest system for Davicon staff or contractors working up to a height of 3.2m above floor level.

## QUICK TO INSTALL AND EASILY MOVED

Needing no special skills, AirDeck can be installed by on site labour, negating the need to organise and co-ordinate additional trades. Combine this with the lightweight nature of the AirDeck bags and the whole installation can be moved quickly and easily from one point of application to another. And once the installation is complete the 80m<sup>2</sup>, once deflated, can be moved to the next job or stored on just one pallet.

AirDeck demonstrates once more that speed and flexibility and total safety go hand in hand.
