SOFT LANDING: A FALL
ARREST SYSTEM THAT
COMBINES SAFETY WITH
EASE OF USE ON SITE

INFLATABLE OR PRE-FILLED

The beauty of AirDeck is its simple, fall-arrest concept, combined with its great adaptability on any site. You can choose from two AirDeck systems – light, easily inflatable airbags or pre-filled ones. Each forms a highly-effective fall-arrest cushion of 750mm thickness, a single layer of which is adequate to protect operatives working at first floor joist level.

A great benefit of these systems is their flexibility and speed of installation. Inflatable bags can be carried by hand to the work area and laid out, ready for inflation – an easy process that takes no more than 30-40 seconds per bag, using one of three types of blower. Robust non-return air valves – tested down to minus 10 degrees – ensures that Air Deck safety is never compromised.

Light, portable and tough, the bags are easy to move from site to site and easy to lay. They clip together – and a particular benefit is that they do not have to be tailored to fit irregular areas. They mould to fill small areas and gaps. Fire retardant options are available for use in timber frame buildings. After use, the bags are quickly deflated, simply by using the same blower in reverse.

Sayfa's AirDeck pre-filled bags are equally light and tough, and just as easy to move and lay. They are pre-filled with encapsulated polyethylene film air pockets and arrive on site ready for instant use.

TOUGH AND COMPLIANT

Sayfa AirDeck products are robustly manufactured and – importantly – they comply with HSE requirements for fall-arrest systems. They have also been tested by NEL and comply to the PAS59:2014 safety standard.

“a highly-effective, fully-tested fall-arrest platform, designed to protect operatives working at first floor joist level”.
